PROFILE

UI/UX Designer with 6+ years building digital products in fast-moving environments, from consumer-facing apps to complex internal ops tools. I don't start with screens, I start with understanding the business, the constraints, and the people behind it. I also write my own UX copy, which keeps ownership tight and handoffs minimal.

EXPERIENCE

UI/UX Designer · Hangry (F&B Tech – Multi-Brand Virtual Restaurant)

Dec 2019 – Present

- Loyalty Landing Page → Identified the real friction point through direct user interviews and redesigned the QR scan flow into a mobile-only web registration page. Result: **76% growth in new loyalty users** (11,624 → 20,476 in 3 months post-launch). Design PIC: research, flow, UI, copy, and post-launch analysis.
- Hangry App (first launch) → Sole designer in phase 1 for a multi-brand ordering app where one outlet serves multiple brands simultaneously. Designed a location-aware UX that kept out-of-range users inside the app. Letting brands speak for themselves before Hangry had the coverage to convert them. **Launched to 100K+ downloads, 4.9★ on Google Play.**
- Design owner for Hangry's internal ops tools (Admin Dashboard Phase 1) → Designed **6+ modules** from scratch to replace a fragmented 3rd-party workflow: Menu Template & Sync Request, Outlet On/Off, Internal Ordering, Kitchen Display System (KDS) for checker crew, Watchtower, Version Tracker, etc.
- Internal Ordering **handles 150+ food replacements** and **600+ KOL orders** per month. Replacing a manual POS process prone to missing items. Version Tracker eliminated the need for IT support to remote into each outlet individually for version updates
- Embedded in a cross-functional team, working daily with product and engineering, running feasibility reviews before handoff to ensure designs shipped as designed

UI/UX Designer · Global Village Indonesia (AgriTech Platform)

May 2019 – Nov 2019

- Led end-to-end design for a mobile platform connecting farmers directly to consumers, eliminating intermediaries. From problem definition and user research through wireframing, hi-fi design, and usability testing.

SKILLS

Design Process	Strengths	Tools
User Research	Analytical & Critical Thinking	Figma
Usability Testing	Cross-functional Collaboration	Whimsical
Benchmarking	Problem Solving	Notion
Problem Framing	End-to-end Ownership	Jira
Wireframing		Adobe XD
Prototyping		AI tools for research, ideation, & rapid prototype
UX Design		
UX Writing		
Post-launch		
Analysis		

EDUCATION

Bachelor of Public Administration (Tax)
STIAM Institute · 2013

UX Design Workshop
Tiket UX Team & Sailendra Institute · 2019
